

NEWSLETTER VOLUME П ISSUE 4 2020 DECEMBER FOR INTERNAL CIRCULATION

CMD's Message

2020 has been an eventful year and not so in a pleasant manner. Following the Pandemic, the world and its ways changed drastically impacting millions of lives and livelihoods like never before. Coronavirus is a relatively a new disease, with fresh information being known on a dynamic basis about the natural

Dr. SREEJOY PATNAIK Chief Surgeon & CMD, Shanti Memorial Hospital

and rest. Its important

to avoid smoking and

consumption of alcohol.

One should also take

the regular medications

as advised for COVID

and those for managing

comorbidities, if any.

Self-health monitoring

blood pressure, blood

diabetic), pulse oximetry

etc can be helpful to gauge

recovery levels . If there

is persistent dry cough /

(especially,

if

at

sugar

home-temperature,

supplements and food items, resuming regular household work and professional work in a graded manner, doing mild/ moderate exercise, practicing Yogasana, Pranayama and Meditation, as much as health permits. One should have a balanced nutritious diet, preferably easy to digest freshly cooked food and get adequate sleep

history of the disease, especially in terms of post-recovery events. After acute COVID-19 illness, recovered patients may continue to report wide variety of signs and including symptoms fatigue, body ache, cough, sore throat, difficulty in breathing, etc. As of now there is limited evidence of post-COVID sequalae and further research is required and is being actively pursued. A holistic approach is required for follow up care and well-being of all post COVID recovering patients.

I would like to share briefly. an integrated holistic approach for managing patients who have recovered from COVID recently, for care

sore throat ,one should do saline gargles and take steam inhalation. However, along with the above measures, follow up consultations with your treating hospital/ doctor is equally important .Keeping the same in mind, Shanti Memorial Hospital

at home. The recovery period is likely to be longer for patients who suffered from more severe form of the disease and those with preexisting illness. Post-COVID Follow Up Protocol at individual level would include continuing COVID appropriate behaviour (use of mask, hand & respiratory hygiene, physical distancing), drinking adequate amount of warm water, taking immunity promoting

has started a Post Covid Care Clinic for over-all recovery and wellbeing of patients who have suffered from the infection.

Dear friends, I reiterate, please continue being careful and exercise special care towards post COVID recovering patients. May good health & sound spirits surround you always!

PCOS:- POLYCYSTIC OVARIAN SYNDROME

In today's scenario polycystic ovarian syndrome (PCOS) is a common multifaceted disorder affecting every one in five women of reproductive age group. It is observed that PCOS is a lifestyle disorder highly prevalent among middle & high income urban population. WHO estimates that PCOS has affected 126 million women worldwide (2016). In India, Experts claim 10% of women to be affected with PCOS, yet no proper statistical data is available. It is currently known to be genetically complex of endocrine disorder. Patient usually present with menstrual irregularities and androgen excess, There is increased risk of multiple morbidities including obesity, Insulin resistance, TYPE-II DM, cardiovascular disease, infertility, psychological disorders, (increased anxiety) depression

& worsened quality of life. PCOS has unique interaction with increasing prevalence of obesity furthermore; it is relevant to related family member and increase risk for metabolic conditions in first degree relatives.

So, Lifestyle modification is the key to the treatment. Modest weight loss of 5-10 % of initial weight has demonstrated to improve many features of PCOS. Healthy life style, good food habits, regular exercise with targeted medical therapy along with monitoring & management of complications & an important part of mother care. Early detection of long term morbidities through appropriate screening is an essential part of management.
